Full Stack Developer

I am a Full-Stack Engineer who approaches development with a focus on reliability and maintainability. Detailed experience in Quality Assurance has given me a deep understanding of how systems fail, which directly informs how I design and build them to succeed.

My expertise has evolved from writing automated tests to architecting the systems themselves. I build scalable backend services and responsive frontends, using my background in automation to ensure that every component is testable, robust, and ready for production.

WORK EXPERIENCE

QualityLogic QA Engineer

02/2020 – Present
Boise, Idaho / Remote

- Developed and maintained automated UI and API test suites for multiple clients
- Built and optimized CI/CD pipelines with GitHub Actions and Azure DevOps to support cross-platform testing (web & mobile).
- Implemented load testing with K6 and mobile test automation via Detox, structured using Page Object Model for maintainability.
- Mentored team members and acted as a technical liaison for client engagements.

QualityLogic Client 2 – Real Estate Enterprise

- Served as a senior QA engineer within a 20+ engineer team at a \$10B+ enterprise, acting as the de facto QA technical lead for a core product area and guiding automation strategy.
- Played a key role in migrating 1,000+ test cases from Cypress to Playwright, improving maintainability, execution speed, and long-term scalability.
- Architected a reusable Factory-pattern test setup, enhancing test readability and maintainability while reducing per-test execution time by 30–60 seconds and eliminating hundreds of lines of redundant setup code.
- Developed a reusable AI-assisted automation strategy, using a secondary AI to evaluate outputs and systematically validate non-deterministic features.
- Engineered a complex CI/CD orchestration strategy to distribute test execution across limited shared test accounts, preventing test collisions while maximizing parallelization and CI efficiency.
- Technologies – Cypress, Playwright, Microsoft Azure Devops, .NET Core

QualityLogic Client 1 – Fitness App Startup

- Provided automation support for five product teams operating in a high-velocity Agile workflow, helping align testing standards and establish consistent coding and QA practices across teams.
- Engineered a parallelized end-to-end test framework capable of executing 500+ tests in under seven minutes, significantly reducing feedback cycles.
- Contributed to and maintained a Detox mobile automation framework, expanding test coverage and supporting automated Android/iOS builds and CI execution through GitHub Actions.
- Designed and scaled a Python-based API automation framework utilizing the Builder pattern to streamline test case creation and improve maintainability.
- Enhanced performance validation by integrating Lighthouse into Cypress workflows, defining measurable benchmarks and enforcing performance thresholds in CI.
- Technologies – Cypress, Detox, GitHub Actions, Allure, AWS, Jira, Lighthouse, Percy, React, React Native, Android Studio, XCode

Test Technician

- Conducted manual and exploratory testing, authored structured test cases, and collaborated with QA/dev teams to identify automation opportunities

EDUCATION

General Courses completed for Computer Science Degree

Utah State University

Logan, Utah • 01/2017 - 01/2019

High School Diploma

Murrieta Valley High School

Murrieta, CA • 01/2013 - 01/2017

PROJECTS

Freelance Real Estate Photography Website

Canyon Light Photography

<https://rephotosbyadina.com/>

Built a production website for a client's real estate photography business using React and Vite. Developed a secure backend with Hono and Cloudflare D1 for review management, including admin authentication and CRUD operations. Used Prisma for local database development and deployed via Cloudflare with automated CI/CD.

Portfolio

<https://grantponting.com/>

SKILLS

- API testing
- Coding

- Load testing
- Performance testing

- Software Development
- UI testing

WEB DEV EXPERIENCE

- Django
- Hono
- mySQL
- React

Programming Languages

- C#
- CSS
- HTML
- Javascript
- Python
- Yaml

Testing Frameworks

- Cypress
- Detox
- K6
- NUnit
- Playwright
- Pytest

QA Tools

- Allure
- Jira
- TestRail
- Zephyr

Devops

- Azure Devops
- Git
- Github Actions
